SOUTH AUSTRALIA.

STATISTICAL REGISTER.

1937-38.

Compiled from Official Records.

By A. W. BOWDEN, A.I.A.,
Government Statist, &c.

ADELAIDE:
By Authority: Frank Trigg, Government Printer, North Terrace.
1939.

Statistical Register of South Australia, 1937-38.

PREFACE.

The Statistical Register is divided into five parts as follow:—

Part I.—Social—Administration, Justice, Education, Hospitals, Charities, etc.
II.—Population and Vital
III.—Finance—State, Local Government, Banking, etc.
IV.—Trade, Transport and Communication
V.—Production

while a Statistical Summary of South Australia for the years 1836 to 1937-38 inclusive is attached at the end of the volume.

Since in most cases considerations of space do not permit of a verbal analysis of the figures, it has been necessary in certain tables to append explanatory notes at the bottom of the page. Careful attention is drawn to these notes since they will generally be of considerable assistance in interpreting the published figures.

My thanks are tendered to the various heads of State and Commonwealth Departments for their co-operation in furnishing statistical data, often at considerable inconvenience.

I desire also to express my appreciation of the services of Mr. H. L. Semmens, Assistant Government Statist, and of the staff of compilers and other officers for their careful attention to intricate details in the compilation of the various sections of this volume.

1st September, 1939. A. W. BOWDEN, Government Statist, etc.

Statistical Register of South Australia, 1937-38.

Part II.—POPULATION AND VITAL.

Report of the Government Statist and Principal Registrar of Births, Deaths, and Marriages on Population and Vital Statistics for the year 1937.

POPULATION, YEAR 1937.

State.—On 31st December, 1937, the population of the State was estimated to be 591,201 (589,312), an increase of 1,889 (2,869) for the year. Males numbered 295,611 and females 295,590.

Metropolitan Area.—The population of the metropolis on 31st December, 1937, was estimated to be 318,190 (316,858), an increase of 1,332, and representing 53·99 (53·77) per cent. of the population.

An area approximately within a 10-mile radius of the G.P.O., Adelaide, is called the metropolis and embraces the cities of Adelaide (31,390 at 31st December, 1937), Unley (41,591), Port Adelaide (29,987), and Prospect (20,511), and the corporate towns of Brighton (5,116), Burnside (24,425), Colonel Light Gardens (4,973), Glenelg (10,947), Henley and Grange (4,565), Hindmarsh (13,135), Kensington and Norwood (14,474), St. Peters (11,681), Thebarton (14,724), and Woodville (27,920), and the district councils of Campbelltown (4,220), Enfield (5,903), Marion (6,162), Mitcham (17,334), Payneham (7,953), Walkerville (4,640), and West Torrens (16,539).

Country Corporations.—The population of the principal corporate country towns at 31st December, 1937, was :—Port Pirie, 11,796, Mount Gambier, 5,702 ; Gawler, 4,149 ; Murray Bridge, 3,663 ; Port Augusta, 3,301 ; Peterborough, 3,327 ; Port Lincoln, 3,040 ; Wallaroo, 2,739 ; and Kadina, 2,097.

Sources of Increase.—The natural increase (excess of births over deaths) for the year was 3,738 (3,447) or 0·63 (0·59) per cent. There was a loss of 1,849 (578) or 0·31 (0·10) per cent. by migration, a loss of 14 with oversea countries and a loss of 1,835 with other States, thus reducing the gain of 3,738 by natural increase to a net gain only of 1,889 for the year, equal to 0·32 (0·49) per cent.

Migration.—For the year 1937 34,170 (34,369) persons arrived in the State, and 36,019 (34,947) departed, loss 1,849. The principal countries were :—Commonwealth States—Arrived 32,350 (32,745), departed 34,185 (33,565) ; United Kingdom—Arrived 825, departed 1,081 ; France—Arrived 198, departed 104 ; Italy—Arrived 233, departed 68 ; Egypt—Arrived 104, departed 23 ; South African Union—Arrived, 97, departed 166 ; India and Ceylon—Arrived 249, departed, 288.

Assisted Immigrants.—3 ; (nil). Arrivals, 1921-1930, numbered 13,114, since when only 10.

Aboriginal Population.—On the 30th June, 1937, there were estimated to be 1,734 full blood and 2,103 half-castes, total of 3,837 aboriginals in the State. These were duly reported by the Police Officers. In addition, an unknown number are in the north-west of the State. Out of the 3,837 aboriginals, 728 were reported as employed (560 males, 168 females) ; 873 are on mission stations, including 186 employed.

Naturalisation.—During the year 91 (105) aliens were naturalised in the State. Germans 19 (15), Italians 21 (35), and Greeks 15 (32).

Parks and Reserves.—The City of Adelaide has 1,927 acres of public parks and reserves. The Metropolis over 5,000 acres, country corporations over 4,000 acres, and country district councils approximately 25,000 acres.

Building Operations.—(*a*) Number—In the metropolitan area permits for the erection of 1,308 (917) dwelling-houses were issued, an increase of 391. The greatest number recorded was 3,543 in 1926, from when the number fell to only 45 in 1931, increasing again each year to 1,308 for 1937. (*b*) Values—The estimated total value of all new buildings, including alterations, was £1,857,512 (£1,576,841), increase £280,671. The values had previously fallen from £4,408,433 in 1926 to £323,224 in 1931.

The following are the particulars for the whole of the State :—Permits issued totalled 1,738 (1,317) for dwelling-houses, total value of all new buildings, including alterations, being £2,257,512 (£1,986,027).

CENSUS, 30TH JUNE, 1933.

During the intercensal period, the population is estimated annually from records of births and deaths and migration returns. On the results of the 1933 census being known, the estimates were adjusted accordingly for each year since the previous census (1921) which will account for any differences in the figures now appearing and those published during the intercensal period.

The population of the State as a result of the census on 30th June, 1933, was 580,949, an increase in 12¼ years of 85,789 (17·33 per cent.).

For the metropolitan area the population was 312,758 (53·83 per cent. of the total).

Dwelling Houses.—The census of 1933 recorded 139,991 (107,914 in 1921) occupied dwelling houses inclusive of tenements, in the State, with inmates averaging 4·15 (4·56) per dwelling. The inmates averaged 4·82 in 1911, 5·16 in 1901, and 5·28 in 1891. There were 5,353 (4,431) unoccupied dwelling houses and 160 (674) being built.

Detail Information.—See 1934-35, 1935-36 or 1936-37 issues of this Part for detail returns and also extracts from notes supplied by the Commonwealth Statistican. A few returns (Nos. 11-19) have been retained herein.

VITAL STATISTICS, YEAR 1937.

BIRTHS.

Numbers for State.—In 1937 the births registered numbered 8,985 (8,911), an increase of 74. The number had fallen steadily from 11,492 in 1927 to 8,521 in 1932, since when the numbers have been irregular, that for 1937 being only 464 more than for 1932, despite the increase in marriages. The 1937 number, however, is the highest since 1931.

Numbers Metropolitan Area and Country.—The births for the city and suburbs for 1937 numbered 4,331, and for country districts 4,654, the respective rates per 1,000 mean population being 13·64 and 17·13. NOTE.—Births are classified according to the usual residence of the mother.

Multiple Births.—Twin births numbered 81 (79) sets. Males 81 (68) and females 81 (90). There were two triplet births in 1937, being the first since 1934. In 1919 there was one quadruplet birth of four males, and for the ten years 1926 to 1935, seven triplet births and 984 twin births. In 1882, there was one quintuplet birth (one male, four females) of whom four died in five minutes and one in two days.

Sexes.—Males numbered 4,611 (4,509) and females 4,374 (4,402). The males always exceed the number of females born, the average number of males born to every 100 females for 1937 being 105·42 (102·43).

Ex-Nuptial Births.—312 (272) were registered during the year. The percentage on total births registered was 3·47 (3·05). The percentage of ex-nuptial births in this State for many years has been much lower than that of any of the States or New Zealand.

Legitimations.—28 (34) were legitimated under the Act during the year.

Still-Births.—In this State the law has only provided for the compulsory registration of still-births from May, 1937, since when 163 have been registered. Certificates of the stillborn are issued by the Departmental Registration Officers for Maternity Allowance, and from this source the following numbers have been ascertained. They give an indication of the probable number for the State :—1928, 290; 1929, 334; 1930, 232; 1931, 184; 1932, 217; 1933, 194; 1934, 168; 1935, 142; 1936, 188; and 1937, 150. From 1931 the figures are incomplete, the allowance being only paid where income did not exceed certain various amounts.

Adoptions.—The Adoption of Children Act was brought into operation in October, 1926. The following are the numbers adopted in recent years :—1928, 130; 1929, 119; 1930, 102; 1931, 89; 1932, 89; 1932, 97; 1933, 98; 1934, 78; 1935, 126; 1936, 99; 1937, 122.

Natural Increase.—The annual natural increase—excess of births over deaths—for the five years 1930-1934 was ·69 percentage of the population. For the five years immediately preceding (1925-1929) it was 1·12 per cent., and for the pre-war period (1910-1914) it was 1·77 per cent. For the year 1937 it was 0·63 (0·59) per cent.

Crude Birth Rates.—The birth rate per 1,000 of mean population for 1937 was 15·25 (15·17).. From 1920 to 1932 the rate fell continuously from 24·72 to 14·74, since when it has been irregular. The lowest recorded was 14·14 in 1935. Fortunately the death rate has also fallen and slightly lessened the effect of the rather substantial fall in the crude birth rates. For the five years' period 1910-1914 (just prior to the war) the annual birth rate averaged 27·98 per 1,000 of mean population; for 1915-19, 25·51; 1920-24, 23·43; 1925-29, 20·16; and 1930-34, 15·54. The average rate for the five years' period 1930-34 represented a fall of 12·44 over the period 1910-1914.

Birth Rates in Australasia.—The following statement shows the birth rate per 1,000 of the population in each of the Australian States and in New Zealand for the last five years :—

Year.	New South Wales.	Victoria.	Queensland.	South Australia.	Western Australia.	Tasmania.	Australia.	New Zealand.
1933	16·98	15·59	18·13	15·32	17·95	19·93	16·78	16·63
1934	16·52	15·20	18·16	14·50	17·68	19·51	16·39	16·51
1935	16·89	15·16	18·31	14·14	18·23	19·41	16·55	16·17
1936	17·31	15·63	19·17	15·17	18·86	19·84	17·13	16·64
1937	17·63	16·02	19·36	15·25	18·95	20·69	17·43	17·29

The birth rate in England and Wales was 14·8 (14·7) in 1936.

Since the crude birth rate is calculated with reference to the total mean population, it is obvious that it will be affected by any marked change in the age and sex distribution of the population over a period of years. Therefore, although such a rate gives a fairly reliable measure over a small period of time, it would not reveal the true position when comparison is made over a long period.

A more accurate comparison may be made by means of a birth rate per 1,000 women at the principal child-bearing ages. This rate refers all births (nuptial and ex-nuptial) to all women at the given ages (married and single). It would be still more accurate to have two rates (*a*) nuptial rate, (*b*) ex-nuptial rate, but space does not permit of a more detailed analysis. The table cannot be continued from 1935 until particulars of ages at the next census become available.

BIRTH RATES PER 1,000 OF FEMALES, AGE 15-49.

Year.	Estimated Mean Female Population, Age 15-49.	No. of Births.	Birth Rate per 1,000 Females, 15-49.	Crude Birth Rate per 1,000 Total Population.

1934	156,464	8,459	54·06	14·50
1935	156,940	8,270	52·70	14·14

MARRIAGES.

Number of Marriages.—5,340 (5,182) marriages were registered for the year 1937, an increase of 158, on the record of the previous year, or an increase of 2,271 during the last six years. The rate per 1,000 mean population was 9·06 (8·82), the highest rate since 1913, except for 1920 which was abnormal, due to the marriage of returned soldiers.

Officiating Ministers.—At the close of the year there were 745 Ministers of Religion and 26 Registrars enrolled with power to celebrate marriages. The Act provides that when a marriage is celebrated by a minister, he must send within seven days, one certificate to the District Registrar and one certificate with licence, &c., to the Principal Registrar, and at the end of each quarter a statement of all the marriages celebrated by him during such period.

Of the total marriages for the year, Methodist Ministers celebrated 1,641, or 30·7 per cent.; Church of England, 1,309 or 24·5 per cent.; Roman Catholic, 650 or 12·2 per cent.; the Registrars celebrated 440, or 8·2 per cent.

The following table gives further particulars :—

Marriages in each Denomination and Ministers Enrolled.

	No. of Ministers.	No. of Marriages.	Per cent. Marriages to Total.		No. of Ministers.	No. of Marriages.	Per cent. Marriages to Total.

Conjugal Conditions of those Marrying.—Bachelors, 4,927 (4,810), spinsters 5,058 (4,918), widowers 294 (274), widows 162 (171), divorced men 119 (98), divorced women 120 (93).

Of the 4,927 (4,810) bachelors, 4,786 (4,667) married spinsters, 68 (77) married widows, and 73 (66) married divorced women.

Of the 294 (274) widowers, 186 (176) married spinsters, 82 (85) married widows, and 26 (13) married divorced women.

Of the 119 (98) divorced men, 86 (75) married spinsters, 12 (9) widows, and 21 (14) divorced women.

Ages of those Marrying.—The numbers marrying at each of the following age groups were :—Under 21 years of age, 188 males, 866 females; 21 years and under 45 years, 4,836 males, 4,299 females; 45 years and upwards, 316 males and 175 females. Total 5,340 males, 5,340 females.

The mean age of those marrying for the year was for males; 29·50 (29·36), and females 26·18 (26·12). These means have only varied by decimal points for the 30 years for which the calculations have been made.

Numbers Over 70 Years of Age.—During the year 33 (26) persons married being over the age of 70 years, 23 were males and 10 females.

Marriages of Minors.—The written consent of the parents is necessary in the case of a marriage of a person under 21 years of age. During the year 1,054 (1,067) minors were married representing 9·9 (10·3) per cent. of the total persons marrying. The numbers at each age were as follows :—

	13.	14.	15.	16.	17.	18.	19.	20.	Total.
Males ...	— (—)	— (—)	— (—)	— (1)	8 (5)	28 (30)	58 (59)	94 (128)	188 (223)

Divorces.—206 (213) decrees of divorce were made absolute during the year. The increase has been considerable since the war. For the five years 1910-1914, the annual average was 12·2 ; 1915-9, 19·0 ; 1920-4, 73·2 ; 1925-9, 94·8 ; and for the five years, 1930-34, 155·4.

Marriage Rates per 1,000 *of Mean Population.*—The annual rates per 1,000 of mean population for quinquennial periods from 1905-1934 and the years 1935 to 1937 were as follows :—

Period.	Rates.	Period.	Rates.	Period.	Rates.
1905-1910	7·93	1920-1924	8·55	1935.....	8·28
1910-1914	9·38	1925-1929	7·54	1936.....	8·82
1915-1919	7·94	1930-1934	6·33	1937.....	9·06

The marriage rate for 1937, 9·06, is the highest rate since 1920 but the annual mean for the five years ended 1934, 6·33, was lower than the annual mean of any quinquennial period since 1895-9. The pre-war period 1910-1914 had the high annual average of 9·38.

Marriage Rates in Australasia.—The following statement shows the marriage rate per 1,000 of the population in each of the Australian States and in New Zealand, for the last five years :—

DEATHS.

Numbers for State.—The deaths registered during the year numbered 5,247 (5,464), a decrease of 217.

Males numbered 2,823 (2,961), and females 2,424 (2,503).

Metropolis and Country.—3,240 deaths were classed to the metropolitan area and 2,007 to the remainder of the State. The rates per 1,000 population were—Metropolis, 11·57 ; remainder of State, 7·39.

NOTE.—Deaths are classified according to the usual residence of the deceased person.

Crude Death Rate per 1,000 *of Mean Population.*—The death rate of total registrations for 1937 was 8·91 (9·30). Although the rates for 1934 to 1937 were higher than the five preceding years it is gratifying to record that there has been a substantial decrease in the rate compared with 1919 and earlier years, when the average was from 10 to 11.

The annual mean rate per 1,000 of population for the quinquennial period, 1900-1904, was 10·99. For the period 1920-1924 it fell to 9·68, 1925-1929 to 8·98, and 1930-1934 to 8·65, a decrease of 2·34 from 1900-1904. This fall helped to counter the effect of the regrettable fall in the birth rate upon the net natural increase in population. The net natural increase fell from an annual mean of 14·06 per 1,000 of population for the years 1900-1904 to 6·89 for the years 1930-1934, a decrease of 7·17.

Death Rate of Sexes.—The annual mean crude death rates for the period 1900-1904 was 12·04 per 1,000 of population for males and 9·94 for females, and for the period 1930-1934, 9·21 for males and 8·08 for females. The death rate of males is thus seen to be much higher than for females and to have fallen since the period 1900-1904 by 2·83 and females by 1·86 per 1,000 of population, equal to 23·51 per cent. for males and 18·72 per cent. for females.

The following are the particulars for the period 1900 to 1937 :—

Death Rates in Australasia.—The following statement shows the death rate per 1,000 of the population in each of the Australian States and in New Zealand for the last five years :—

The death rate in England and Wales was 12·1 (11·7) in 1936.

Index of Mortality.—Over a long period of years, the crude death rate is open to objection when used as a measure of the vitality or mortality of the population. Mortality can properly be examined only with reference to the age and sex distribution of the population. Analysed mortality tables are now in course of preparation for the Commonwealth Statistician and, when these are available, it will be possible to give a true measure of the great increase in the longevity of the population over the past two decades.

The expedient is often used of substituting for the crude death rate a " standardised death rate " or " index of mortality." Such a rate is shown in the following table, in which the differences in the age and and sex constitutions of the populations of the six States have been taken into account in computing their respective indexes of mortality. The results for each are based upon a standard population, distributed according to sex, into eleven age-groups. This table may be taken as a fairly reliable measure of the relative total mortality of different States during the period 1921 to 1936. It will be noticed that South Australia has the lowest index for the Commonwealth.

Deaths of Centenarians.—The deaths of 1 male aged 104 and 2 females (1-101, 1-105) were registered for the year. The previous year there were 2 males (1–101, 1–107) and 6 females (2–100, 2–101, 1–102, 1–104).

Deaths in Age-Groups.—297 (277), or 5·66 (5·07) per cent. of the total deaths occurred within the first year of life, and 382 (391), or 7·28 (7·16) per cent. within five years of life, 552 (600), or 10·52 (10·98) per cent. of the total were under 20 years of age, and 2,237 (2,316), or 42·63 (42·38) per cent. were 70 years and over. The following are the particulars of the deaths in age-groups :—

Causes of Death.—The Statistical Classification of the Causes of Death adopted is in accordance with the International List of Causes of Death as revised in 1929. Previous to 1931, the 1920 revision had been used.

The number of deaths, male and female, from each of the causes set forth in such list, and the age-groups decided upon by the Conference of Statisticians and Health Authorities in 1928, have been classified and may be found in Tables Nos. 34 and 36 of this Section of the Statistical Register. The principal causes only can be referred to in this report, and are set forth in the following table. The percentage of each to the total deaths and the rates of each per 10,000 of mean population are also shown.

Diseases of the Heart.—From the foregoing it is noted that diseases of the heart, account for the greatest number of deaths, though the rate per 10,000 of mean population from 1910 to 1930 varied but little except during the war period when it increased. In quinquennial periods the average annual rates per 10,000 of population were :—1910-1914, 11·11 ; rising in the war period 1915-1919 to 12·16 ; 1920-1924, 10·69, 1925-1929, 10·53 ; 1930-1934, 13·94. Some of the substantial increase since 1930, and decreases under senility and ill-defined diseases, are the result of the movement initiated for more definite medical certificates, the better classification having proved the 1930 and previous figures to have been understated.

For the year 1937 the deaths totalled 1,041 (1,101), decrease 60, the number being equal to 19·84 (20·15) per cent. of the total deaths and 17·67 (18·74) per 10,000 of the mean population.

Cancer and Tuberculosis.—Except for irregular movements since 1930, the death rate for tuberculosis has been showing a heavy continuous fall, the rate for 1937 being less than half the rate 20 years ago. Cancer had been showing a fairly continuous rise, but during the last few years the rate has been fluctuating, that for 1937 showing a decrease over the high rate of 1936. The increase in latter years is not so serious as it would appear from the crude death rate, for most cancer deaths are of older persons, and these now constitute a much greater proportion of the population. See also remarks below *re* cancer.

The following are the comparative particulars for the years 1910 to 1937 :—

1937 (")	256	4·35	3·80	725	12·31

From the foregoing table it is noted that the deaths per 10,000 of population from tuberculosis averaged annually 8·65 for the period 1910-1914, and those for cancer 7·94, or ·71 less than tuberculosis, whilst the annual averages for the last five years, 1930-1934, were—Tuberculosis, 5·14 and cancer 11·29, the rate for cancer being 6·15 above tuberculosis for the latter period, whilst for the year 1937 the average per 10,000 of population from tuberculosis was only 4·35 (4·00) and from cancer 12·31 (12·60).

It is rather a remarkable fact that the death rates from tuberculosis and cancer combined remain very constant, *e.g.* 1910-1914, 16·59 ; 1930-1934, 16·43 ; 1937, 16·66.

Tuberculosis of the Respiratory System.—Out of the total deaths from tuberculosis of all kinds 256 (235) for the year 1937, tuberculosis of the respiratory system caused 224 (204) deaths, or 87 (85) per cent. The rates for the two years were 1936, 3·47 ; 1937, 3·80 ; a considerable fall on previous years. For the period 1910-1914 it was 7·18, or greater by 2·68 per 10,000 of population than in the period 1930-1934.

Cancer—Seat of Disease.—Cancer of the stomach and duodenum 159, 105 males and 54 females, breast 76, male genital organs 74, rectum 38, buccal cavity and pharynx, 33, and uterus 49, are the chief seats of the disease. Total cases 725 (740). Further details are shown in Return No. 31.

Notes re *Increased Deaths.*—Although the deaths from cancer as shown in crude numbers and rates have increased rapidly during the last 20 years, the position is not so serious as it at first appears. The age constitution of the people has a marked effect, due to the fact that most cancer deaths are of older persons. The lower birth rate and the increased longevity of the people have had such an effect that whereas the number of persons under 40 years of age had only increased by 27 per cent. between the 1911 Census and the 1933 Census, those 40 years of age and over had increased by 88 per cent. and those 60 years and over by 112 per cent. The crude cancer death rate between 1911 and 1933 had increased 59 per cent., but for persons under 40 years of age it had decreased 21 per cent. ; for persons 40 years of age and over it had only increased 25·5 per cent. and for those 60 years and over only 21·5 per cent.

Further it is almost certain that more accurate diagnosis by the medical profession has resulted in an increased number of deaths being classed to cancer. The rate of deaths of persons 60 years of age and over from senility has decreased by 73 per cent. and from ill-defined causes by 81 per cent. from 1911 to 1933, and probably a number of deaths that would have been merely classed as senility or which were ill-defined previously are now classed to some definite disease, such as cancer.

Tuberculosis, Cancer, Heart Diseases and Nephritis.

It has previously been pointed out that the crude death rate is not an accurate measure of mortality, which can be properly examined only with reference to its incidence at individual ages. This is even more important when comparing the effect of different diseases, which fact may be illustrated by the table hereunder showing the average mortality over the three years 1932-1934 per 10,000 of population at decennial age groups. No attempt has here been made at statistical refinement, but the table may be taken as giving an approximate measure of the relative incidence of mortality from the causes specified at various ages.

The table may serve to illustrate the heavy mortality from Tuberculosis at ages under 50, the heavy rate for females at ages 20-29 being outstanding.

Since mortality decreases rapidly during the first five years of life, the death rate from tuberculosis has been prepared for age-groups 0-4 and 5-9 as follows :—

Age-Group.	Males.		Females.	
	Tuberculosis.	All Causes.	Tuberculosis.	All Causes.
0-4	2·44	98·52	1·81	82·53
5-9	0·49	11·83	0·76	10·39

Too much reliance cannot, however, be placed in the death rate at group 0-4, since here the group rate is an average of a rapidly changing mortality. The same criticism applies throughout, but the effect is significant only at the extreme ages.

Pneumonia (including Broncho-pneumonia).—Total deaths 275 (343), rate 4·67 (5·84). The annual rate for the period 1910-14 was 5·15, and for the period 1930-34, was 5·95, an increase in the latter period over the earlier of 0·80 per 10,000 of population, but there has been a continuous fall from 6·89 in 1934 to 4·67 in 1937. Broncho-pneumonia deaths were 152 (168), and Lobar, 116 (158).

Bronchitis, Acute, Chronic, and Unspecified.—Total deaths 57 (74), rate 0·97 (1·26). Bronchitis averaged annually the five years 1930-1934, 1·25 per 10,000 population, and 2·93 for the years 1910-1914, a decrease of 1·68 per 10,000 of population.

Other Respiratory Diseases.—Excluding the deaths from pneumonia 275 (343) ; and bronchitis 57 (74), the total deaths from other respiratory diseases numbered 122 (124), the principal causes being—pleurisy, 15 (19) ; congestion and haemorrhage of lungs, 67 (75) ; asthma, 20 (3).

Parasitic and Infectious Diseases.—These classes of disease were responsible for 361 (339) deaths, which includes the 256 (235) deaths from tuberculosis already reviewed. The remaining chief causes were :—Typhoid fever 4 (4) ; whooping cough, 5 (9) ; diphtheria, 27 (30) ; influenza, 9 (17) ; dysentery, 3 (8) ; syphilis, 16 (14) ; tetanus, 7 (11) ; acute poliomyelitis, 2 (—).

Notifiable Infectious Diseases.—Certain proclaimed infectious diseases are notifiable under the Health Act to the Central Board of Health. A total of 3,863 (4,830) cases were reported during the year.

The principal diseases were diphtheria, 774 (1,279) ; typhoid fever, 27 (51) ; erysipelas, 110 (121) ; measles, 72 (88) ; puerperal fever, 58 (89) ; pulmonary tuberculosis (phthisis), 331 (266) ; scarlatina and scarlet fever, 214 (397) ; whooping cough, 684 (751) ; chicken pox, 1,223 (1,423) ; influenza, 143 (135) ; mumps, 107 (198). An epidemic of poliomyelitis anterior acuta commenced towards the end of the year, 85 (5) cases being reported with 2 (—) deaths. Chicken pox and mumps were not notifiable from 25/11/37.

Cerebral Haemorrhage, Embolism and Softening (including combined with Arterio-sclerosis).—Total, 492 (527). The annual rate per 10,000 of population for the five years, 1930-34, was 7·47. For the period 1910-1914 it was 4·75, 1915-1919, 5·60, and 1920-1924, 6·32. Thus it is seen the increase has been continuous. For 1937 it was 8·35 (8·97).

Diabetes Mellitus.—116 (110). Males 47 (33), females 69 (77). Of the total 106 (94) were 50 years of age and over.

Puerperal Diseases, Accidents of Pregnancy and Confinement.—Total 46 (53). Of this number 7 (7) were recorded as due to puerperal septicaemia, and 13 (20) to abortion with septic conditions, including 4 (5) criminal abortion. The rate is equal to 5·12 (5·95) per 1,000 live births. Excluding criminal abortion the rate was 4·68 (5·39).

External Causes.—Total 374 (339). The principal causes were—Suicides, 56 (69), equal to a rate of 1·0 (1·2) per 10,000 of population ; accidental drowning 40 (35) ; automobile accidents, 105 (76) ; traumatism by falls, 62 (50) ; homicides, 8 (6) ;

Infantile Mortality.

There were 297 (277) deaths of infants under one year of age, an increase of 20. The death rate for 1936 of 31·09 had been just a little in excess of the world record of 30·96 for New Zealand. The rate for 1937 increased to 33·05 which is the lowest South Australian rate, except for 1936 and 1933. For many years South Australia, in common with the other States of the Commonwealth and New Zealand, has had a very low mortality rate for infants under one year of age compared with other countries. But even so the economic loss to the State is considerable, for in the last 10 years, 3,553 infants died before reaching the age of one year and, in addition, 1,225 before reaching five years of age, making a total loss of 4,778 under five years of age. In other works, the State has lost by death during the last 10 years approximately one baby in every 26 born before reaching the age of one year with an additional loss before the age of five is reached. Further, there is the loss of unrecorded still-born children, approximately 300 annually. (See paragraph *re* still-births, page 4).

Infantile Mortality in Australasia.—The following statement shows the infantile death rate per 1,000 births in each of the Australian States and in New Zealand, for the last five years.

1937	40·68	36·70	35·64	33·05	37·52	41·73	38·06	31·25

The infantile death rate in England and Wales was 59·0 (57·0) in 1936. The infantile deaths per 1,000 births in the Australasian capitals in 1936 were as follows :—Melbourne, 44·06 ; Sydney, 41·73 ; Brisbane, 37·86 ; Adelaide, 28·63 ; Perth, 44·21 ; Hobart, 50·48 ; and Wellington, 33·77.

1935-1937	288	32·98	1937	297	33·05

The annual mean death rate of infants under one year of age for the five years 1895-1899 was 110·25 and for the five years, 1930-1934, only 38·05. Fall of 72·20 per 1,000 live births is certainly very gratifying, with a further fall in later years. The 1937 rate was only about half the rate 20 years ago, and one-third of the rate around 1900. There is also a decided fall in the deaths of children over 1 year of age.

Still there are points revealed by an analysis of the facts which are not satisfactory. I refer to the record of deaths under one month of age. Most of the improvement has taken place in the rates for ages above one month and under 12 months. In the tabulated summary and in the graphs the rates for deaths of infants under one month, under one week, and under one day of age are shown separately, and these show less progress.

Under one month for the period 1900-1904 the mean rate was 32·85, and 1930-34, 23·59, a fall of only 9·26, whilst for the ages one month and under 12 the rates for the same period were 59·10 and 14·46, a fall of 44·64. Further, during the last period, of the total number (1,060) dying within one month of life 839 or 79 per cent., died before reaching the age of one week, and 452 or 43 per cent. of the 1,060 were less than one day old. The great majority of those dying under one month of age died from pre-natal causes.

The annual mean number and annual mean rates per 1,000 births of infants dying within the following ages were as follows :—

Explanation of Graph.—The bases of the small rectangles represent the years, and the annual means for the quinquennial periods are also shown. The figures to right and left represent the rate per 1,000 live births.

Pre-natal Causes of Death.—Code Nos. 157—161. During the five years, 1930-34, deaths from malformations, congenital debility, premature births, and other diseases of early infancy which may be termed "Pre-natal Causes" accounted for 1,095 deaths, or 64 per cent. of the total dying within one year of age compared with 43 per cent. for the period 1910-14. Nearly all of these deaths occurred within one month of birth. Deaths from diarrhoeal diseases for 1930-34 were 127, or 7 per cent. compared with 26 per cent. for 1910-14, and other diseases 490, or 29 per cent. compared with 31 per cent.

The average percentage of loss from pre-natal causes is greater for the period 1930-34 than for the previous three quinquenniums. These facts indicate the direction in which efforts for the saving of infant life should be directed.

Sexes.—The number of boys dying before reaching one year of age for the last five years numbered 801, and girls 649, the deaths of boys being 23 per cent. greater. For 1937—Of the total deaths 297 (277)—162 (152) were males and 135 (125) were females.

Care of Infant Life.—The Mothers' and Babies' Health Association, has 60 branches in the State; 42 of which are in the metropolitan area. In addition, the Railway Travelling Clinic calls at 28 country towns every two months, and on Eyre Peninsula a Nurse calls at 16 towns every six weeks. The Government makes an annual grant of £3,000 to the Association. During the year ended 31st July, 1937, the nurses paid 2,056 visits to expectant mothers and 24,610 to young babies. Baby clinics are also established in the State, and during 1936-37, 101,152 examinations of babies brought by mothers were made and advice given when necessary.

ANATOMY ACT, 1884.

The Inspector of the School of Anatomy reported, under Clause 6, that 12 (14) bodies had been removed to the University School of Anatomy for anatomical examination.

DIRECT OVERSEA IMPORTS, 1937-38.

(For Alphabetical Index to Items see page 14.)

No. 21.—Direct Oversea Imports into the State of South Australia from 1st July, 1937 to 30th June, 1938.

NOTE.—With the exception of Great Britain, New Zealand, and Australia, and in cases where a single country is concerned, only those countries are shown under each article where the value of imports exceeds £100.

In all cases where an item was not imported during the year, classification number of the item has been omitted from following table.

Value of Imports.—The value of goods imported from countries beyond Australia is recorded in British currency and represents the amount on which duty is payable or would be payable if duty were **ad valorem.** Section 154 (1) of the Customs Act, 1901-1930, provides that " where any duty is imposed according to value, the value for duty shall be the sum of the following :—

(*a*) (I.) The actual money price paid or to be paid for the goods by the Australian importer plus any special deduction ; or
(II.) the current domestic value of the goods, whichever is the higher;
(*b*) all charges payable or ordinarily payable for placing the goods free on board at the port of export ; and
(*c*) ten per cent. of the amounts specified under paragraphs (*a*) and (*b*) of this subsection.

" Current domestic value " is defined as " the amount for which the seller of the goods to the purchaser in Australia is selling or would be prepared to sell for cash, at the date of exportation of these goods, the same quantity of identically similar goods to any and every purchaser in the country of export for consumption in that country ".

Quantities—Generally, but not invariably, quantities have been shown in the ordinary trade unit ; where the cental is used, the unit equals 100 pounds avoirdupois. Where imports have been declared in packages without an indication being given of the number, capacity or weight, of the articles imported, the values only have been inserted.

N.E.I means " Not elsewhere included ".

Import Duties.—Duties charged on imports into South Australia are collected by the Commonwealth of Australia under various Acts.

DIRECT OVERSEA EXPORTS, 1937-38.

(For Alphabetical Index to Items, see Page 14.)

No. 23.—RETURN showing the Direct Oversea Exports from the State of South Australia for the Year 1937-38.

NOTE.—In all cases where an item was not exported during the year, the classification number of the item has been omitted from the following table.

Value of Exports.—The value of goods exported (including cost of containers) is recorded in Australian currency, and is generally the value in the principal markets of the Commonwealth in the ordinary commercial acceptation of the term, except for the following commodities, concerning which an alteration in the method of valuation of exports was made as follows :—

From 1st July, 1929. Sugar (*a*) sold in Australia for export : The value f.o.b., at which the sugar is sold to oversea buyers ; (*b*) shipped on consignment : The f.o.b. equivalent of the ruling price of such sugar in the London markets. Goods on which bounty or rebate is payable on export : The value of the goods in the principal markets of the Commonwealth less the amount of any bounty or rebate.

From 1st July, 1930. Wool (*a*) sold in Australia for export : The actual price paid for the wool plus the cost of all services incurred in placing the wool on board ship ; (*b*) shipped on consignment : The f.o.b. equivalent of ruling Australian prices.

From 1st July, 1932. Wheat (*a*) sold in Australia for export : The f.o.b. equivalent of the price at which the wheat was sold ; (*b*) shipped on consignment : The f.o.b. equivalent of the current selling price overseas.

From 1st April, 1934. Butter (*a*) sold in Australia for export : the f.o.b. equivalent of the price at which the butter was sold ; (*b*) shipped on consignment : the f.o.b. equivalent of the current ruling price overseas.

From 1st July, 1934. Flour (*a*) sold in Australia for export : The f.o.b. equivalent of the price at which the flour was sold ; (*b*) shipped on consignment : The f.o.b. equivalent of ruling Australian prices.

From 1st July, 1937, the following revised definition of f.o.b. values have been adopted for exports generally :—

(1) Goods sold to Oversea buyers before export : The f.o.b. equivalent of the price at which the goods were sold (*e.g.*, as regards wool, the actual price paid by the overseas buyer, plus the cost of all services incurred by him in placing the wool on board ship).

(2) Goods shipped on consignment : The Australian f.o.b. equivalent of the current price offering for similar goods of Australian origin in the principal markets of the country to which the goods were despatched for sale (as regards wool, the f.o.b. equivalent of current price ruling in Australia will normally provide a sufficient approximation to the f.o.b. equivalent of the price ultimately received.

Exports of Australian Produce.—Articles which were partly or entirely manufactured from imported materials, raw material produced in Australia and manufactures therefrom, are shown under this heading. No distinction is now made in the records between the produce of this State and that of other States of Australia, the whole being classified as Australian.

N.E.I. means " Not elsewhere included ".

Exports to Other States.—Goods transferred from South Australia to the other States of the Commonwealth for shipment to oversea countries are shown as exports from the State from which the goods were finally despatched and are not included in the South Australian details.

Ship's Stores.—Goods shipped as " Ships' Stores " on board overseas ships are not included in exports. For ships' stores see Table No. 19.

* Including scoured wool converted into greasy.

† Excluding £2,592,016 half-share of profits on resale of wool by Imperial Government to which the growers were entitled.

‡ Interstate trade in wool, stocks, and wool used in local factories, are factors which cause differences between figures for oversea export and for actual production.

NOTE.—In compiling the above tables, the mean rainfall in each agricultural county has been first obtained from all available records within or on the borders of the county, and then weighted by the area of the county to obtain the mean rainfall for each Division and the State. Counties Hamley and Young (Murray Mallee), Derby, Lytton, and Taunton (Upper North), and Manchester, Hore-Ruthven, and York (Western) being non-agricultural counties, are excluded in compiling the average rainfall for this return.

(*a*) Gross value is defined as the value placed on recorded production at the wholesale price realised in the principal markets Where primary products are absorbed at a local point or become raw material for a secondary industry, the value in each case is presumed to be the value at the principal market. Values include Bounties.

(*b*) Marketing Costs.—Freight, commission, containers, insurance, Etc.

(*c*) Local value is gross value less marketing costs, being value at place of production.

(*d*) Production costs such as stock feed, petrol, oil, seed costs, seed pickling, manures, spraying, dips, and power and water used in irrigation.

(*e*) Production Costs.—Depreciation of machinery and implements (Agricultural, 10 per cent., pastoral and dairying, 5 per cent.) and maintenance of buildings and fences (4 per cent. on estimated present value of buildings, Etc., used for farm or station purposes, excluding residences).

(*f*) Net value is local value less production costs.

(*g*) Local value is also accepted as net.

(*h*) Gross value is also accepted as local and net.

(*i*) Not available for previous years.

(*j*) Power, fuel, explosives, timber, Etc.
